

Plantation Shutters

A favourite of designers and architects, plantation shutters bring peace of mind to the home, with timeless style. Plantation shutters are available in a range of materials, and are custom-made to snugly fit your windows.

Plantation Shutters are available in hardwood and PVC. Paulownia is authentic hard-wood timber and is suitable for most areas around the home. Available in a painted or stained finish.

PVC Plantation Shutters are a heavier material than the timber shutters. PVC shutters are reinforced with an aluminium rod through the centre of each louvre. PVC shutters are suitable for wet areas such as bathrooms and kitchen.

Plantation Shutters are perfect at controlling light and airflow into your space, and have natural insulating qualities.

There are many control options available to suit your needs. These include with or without tilt rods, and can even be motorised for those hard to reach places.

Plantation Shutters are a timeless design feature as well as being practical. Plantation shutters are all custom made to your windows and are available in 30 different colours. You'll be spoiled for choice!

Cross-section of Hardwood Louvres

Cross-section of PVC Louvres

Features & Benefits:
